Abstract: We live at a time when information becomes the primary means that brings primacy to almost all fields of human activity. Today, having the right information is a basic precondition in making many important decisions. Thanks to technological advances, and, above all, computer devises and the Internet, there is no longer a problem finding these information, because they are now available to almost everyone. But for this reason, the easy availability of a large number of different information, other problems have arisen, which relate primarily to the integrity, reliability and security of this information. The aim of this paper is to demonstrate some kinds of dangers which lie in collecting information from the Internet, and to point out the basic rules that we must adhere to when we collect and use this information, in order to maximum protect us from the security point of view.

Keywords – Internet, risks, malicious software, prevention, recommendations
